

## What is structured wiring?

Structured Wiring is a whole house wiring system for communications and entertainment that anticipates technological advances and lays the groundwork for future home technology and smart home enhancements.

## Components of a home structured wiring system

- **The Distribution Panel** Usually located in one of the closets or the attic of your home, the distribution panel does two things: 1) terminates all of the service provider services: telephone, DSL, Cable TV, satellite, and Cable Modem to this central location within the house and 2) Distributes those signals to locations throughout the house. Various active/passive modular units installed within the panel allow for the distribution of the signal to locations throughout the house. An electrical power source in the distribution panel provides power to various powered devices installed in the panel.
- **High-performance Cabling** Using Cat5e and RG6 cables that can deliver performance you need today and in the future, cable runs (also called home runs) are installed from the distribution panel to each location in the house where the signal is to be terminated. Home runs are also installed to audio/video sources.

Upgrade options shown

## What comes standard in your new home?

- **(4) TV locations** RG6 and Cat5e are standard. This allows HD Satellite, cable, and DVR technology at each location.
- **(4) Phone locations** Cat5e can handle up to four incoming phone lines.
- **(2) Network locations** Cat5e will allow central distribution of Internet connections with the use of a router and a modem in the panel.
- **(2) 5.1 Surround Sound locations** Includes wiring for 4 surround sound speakers, 1 center channel speaker, and a sub-woofer.
- **(4) Independent Stereo locations** Includes wiring for 2 speakers and a volume control in selected rooms.
- **(1) Projector location** Wiring for a DLP or CRT Projector. (Comes standard if home has media room)

## Other options

- **Pool stereo location** Wiring for speakers outside the home to the pool area for rock speakers.
- **Video surveillance cameras** Wiring for CCTV locations for added home security and peace of mind.
- **7.1 Surround Sound locations** Includes wiring for 6 surround sound speakers, 1 center channel speaker, and a sub-woofer.

## What is the cost of whole house audio, family room surround sound, or a media room?

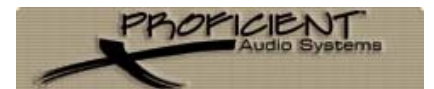

Stone brook has several package deals that range in price based on the wiring your house currently has. Ask your sales person and they can give you exact pricing.

## What if I want something other than a package?

We are happy to meet with you and give you a system design that is competitively priced and is tailored to your particular listening and viewing needs.

## Why should I choose Elite Media Systems?

This one is easy! We are the company that wired your house and we know better than anyone what your options are. We offer a fully trained staff of installers certified with CEDIA. **So, give Elite Media Systems a call today!**
